aluminium bottom bar - telescopic

Nylon coated stainless steel guide wires

bracket fixed to the wall for tensioning the nylon coated stainless steel wire

If the units can be installed the way it is shown on the previous page , then we follow the angle of the glass and the blinds can be made to completely fill the glass opening when they are fully down.

If the blinds are installed in the ceiling as show below you will always have gaps between the blinds due to the shape of the window and the controllers will get the Sun coming through those gaps and will have difficulty seeing due to glare and dazzle.
